

Project Manager

carbonTRACK are currently looking for a highly motivated, passionate and outstanding Project Manager to join our team. Your key objectives will be the successful delivery and project management of multiple projects direct to clients and through channel partners. In addition you will get engaged in the pre-sales process, supporting new sales opportunities. This role requires someone with five or more years of professional experience.

At carbonTRACK we are changing the way people use and understand energy. We envision a world where energy is consumed sustainably, shared fairly, and empowers all people. Our energy management hub, coupled with our app are enabling people to take control of their sustainability profile, through monitoring, control and home automation. carbonTRACK has recently seen unprecedented growth within Australia as well as our operations in South Africa, New Zealand and the United States of America.

Job Skills and Requirements

- Excellent project management skills across a wide range of R&D and business projects
- A successful history of delivering quality projects on time and to budget
- Good communication, coordination, planning and analytical skills
- The ability to build strong relationships at all levels of the business
- Provide input into strategic and new departmental processes
- Excellent stakeholder management skills
- Utilise your excellent face to face experience and client negotiation skills, as you will be required to demonstrate to potential customers how we will fulfil their requirements in terms of project delivery
- Solutions driven project manager that does not need to change the critical path instead having the versatility to manage the change
- Experience with Agile environments garnered from years of practical use is preferred
- At least five years Australian experience as a Project Manager

Key Accountabilities

- Create quality documentation to define the project and support throughout the project lifecycle
- Lead project delivery, including the development and delivery of all system components, identifying interdependencies and leveraging resources to maximise efficiencies and achieve required outcomes
- Lead and oversee all aspects of project development and implementation, including preparing and monitoring project plans, supporting project governance, identifying, allocating and managing resources, and meeting reporting requirements, to ensure project outcomes are achieved on time, on budget, and to quality standards.
- Develop and implement strategies and tools for the continuous monitoring and evaluation of the project, including risk and contingency management, benefits realisation, and project impact and quality measures, to identify and address issues and assess project progress and overall effectiveness
- Lead and manage project teams to deliver all key project milestones and outcomes

The successful candidate will show strong leadership, time management, budgeting and analytical skills. If you think this position is suited to you please apply through Seek and attach your cover letter and resume.

Please note all applicants must be legally entitled to work in Australia and have full working rights.
